Assignment 2 Group Report

Our three-member group built an in-memory Python To-Do List. All three feature PRs are reviewed and merged, and the complete local suite passes 15 test cases. The final Pages update and this report are prepared in PR #4; its peer approval and merge remain outstanding.

Group Size: 3 **Chosen Theme:** To-Do List

Full Names: Soulaymane Alahiane; Aya Drissi; Rim Zemmouri

Student IDs: Soulaymane 158002; Aya 147970; Rim 169600

Course Codes & Sections: Soulaymane CSC 3324 03; Aya CSC 3324 03; Rim CSC 3324 01

GitHub Usernames: soulaymanealahiane; Aya-Drissi; Rimzemmouri

GitHub Repository URL:
https://github.com/soulaymanealahiane/GitLab-Assignment2

GitHub Pages URL:
https://soulaymanealahiane.github.io/GitLab-Assignment2/

Project & Role Distribution

We followed the 3-member path. Soulaymane implemented task creation with unique IDs and validated titles. Aya implemented completing and reopening tasks. Rim implemented filtering and integrated the command-line menu. Each member contributed real Python logic and unit tests through a feature branch and PR.

Branches, Commits & Contributions

Soulaymane: feature/soulaymane-add-tasks; 25b2ef5 added logic, tests and CI, 662b386 fixed trimming, and 5dd392b added the requested ID regression test.
Aya: feature/aya-completion; 182f3bf added completion/reopening, 5e0b3d5 added tests and status, and a3f57f4 covered empty lists.
Rim: feature/rim-filtering; 0ebc849 added filtering, 162ddae added tests, 563c914 changed status, 28b1283 resolved the merge conflict, and 217f95d integrated the menu. Contributions are attributable to each member's GitHub account.

Pull Requests & Code Review

PR #1 was authored by Soulaymane and reviewed by Aya. She requested an inline regression test for existing IDs 2 and 7 producing ID 8. Soulaymane committed 5dd392b to the same branch; Aya re-reviewed, approved, and merged. PR #2 was authored by Aya and reviewed by Rim, who requested empty-list coverage before approving the correction. PR #3 was authored by Rim and received Soulaymane's meaningful line review and approval before merging. PR #4 awaits peer review.

Merge Conflict

Aya and Rim branched from main commit 4f6d611 and changed the exact shared README line, *Project status: Development in progress.*, differently. Aya's PR merged first. Rim fetched and merged origin/main into her existing branch. **Current** was Rim's filtering/menu status; **Incoming** was Aya's creation/completion status. Commit 28b1283 records the staged and committed resolution: *Project status: Task creation, completion, and filtering are ready.* Soulaymane reviewed this resolution as the third member. The evidence view reconstructs the conflict from the recorded parents using Git's remerge diff; it is labelled as historical verification.

Unit Tests

15 local cases passed: Soulaymane 4, Aya 6, Rim 5. Normal cases cover creation, completion, reopening and filtering. Boundary cases include whitespace trimming, nonconsecutive IDs and empty lists. Error cases verify blank titles, missing task IDs and invalid filter statuses. The complete suite and menu smoke checks passed before the final feature merge.

Continuous Integration

.github/workflows/tests.yml runs on pushes and Pull Requests. The pytest job uses ubuntu-latest, checks out the repository, prepares Python 3.12, installs requirements.txt and runs python -m pytest. Run 38324302205 failed because a title was checked with strip() but stored untrimmed. We inspected the failing assertion and committed 662b386 on the same branch to store the trimmed title. Run 38324521813 passed. The final feature PR also passed CI.

Ruleset & Protected main

The active Protect main ruleset targets main. It requires a Pull Request, at least one approving review and successful pytest; it restricts deletion and blocks force pushes. Its bypass list is empty. The required check was added after CI worked. PR #1 showed successful checks while merging remained blocked for missing approval. The feature PRs merged only after the review/check conditions were satisfied. PR #4 remains subject to the same protection.

Continuous Deployment

GitHub Pages is configured to publish main/docs, and its existing live site was verified. PR #4 contains the final visible change: all three implemented features and accurate 0-6 menu instructions. That PR is awaiting peer approval and merge, so the final automatic live update has not yet been verified. The last figure is explicitly a preview of the proposed update. The live Pages URL is in README.md and this report.

Contribution Summary

Soulaymane: task creation, setup, CI, protection, Pages/report preparation; feature/soulaymane-add-tasks and docs/final-pages-update; authored PRs #1 and #4; reviewed PR #3; 4 tests.
Aya: complete/reopen; feature/aya-completion; authored PR #2; reviewed PR #1; 6 cases.
Rim: filtering, menu and conflict resolution; feature/rim-filtering; authored PR #3; reviewed PR #2; 5 tests.

Fair Use of AI

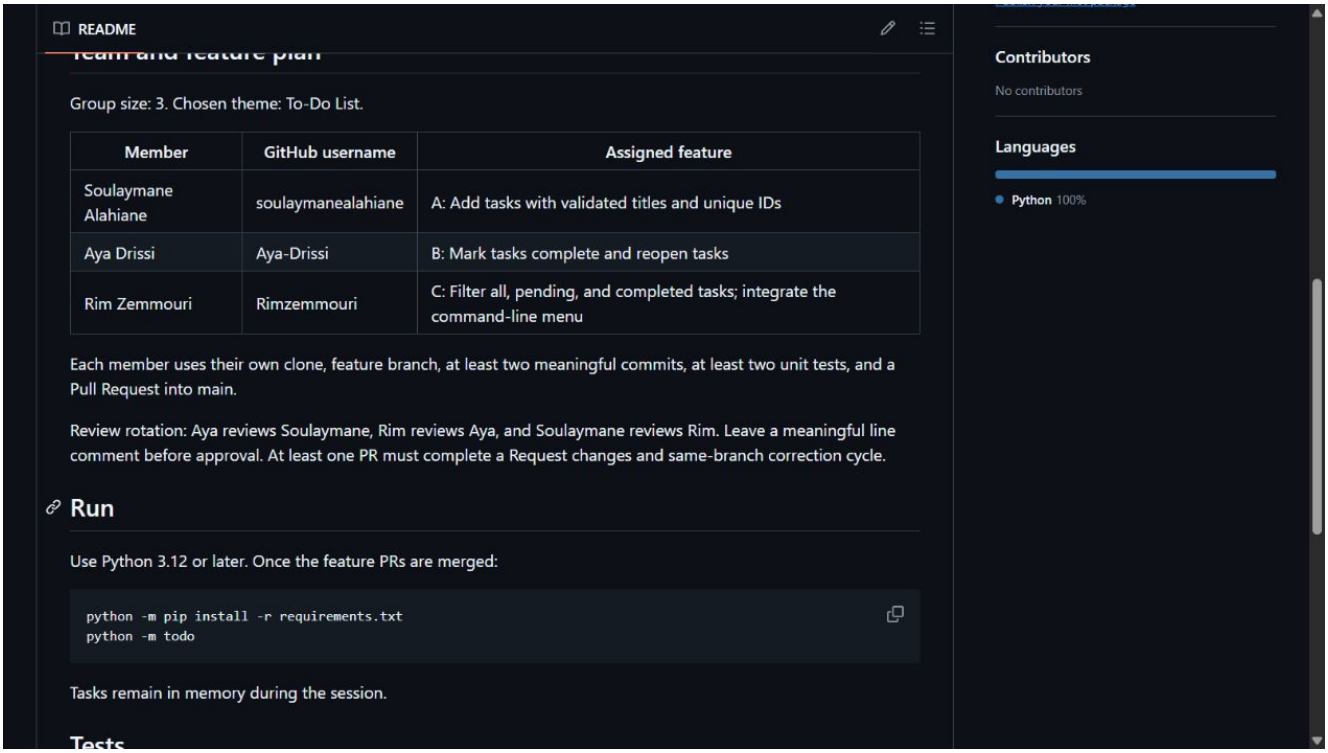

Soulaymane used Codex for his feature, tests, CI, repository setup, review verification, Pages updates and report preparation. Aya disclosed Codex assistance with implementation, tests and the GitHub workflow; she submitted the requested review and approval through GitHub after her agent's integration lacked review permission. Rim used her AI agent for filtering, tests, conflict resolution and menu integration. Each member's contributions and reviews remain attributable to their own account; the final documentation and report preparation are Soulaymane's work.

Sources & Reflection

Sources: the supplied Assignment 2 document; pytest Get Started; actions/checkout; actions/setup-python; GitHub rulesets API; GitHub Pages publishing sources; and the linked PR/CI records.

The main collaboration difficulty was coordinating competing README edits from the same main version while keeping the features separate. Inspecting both parents of merge 28b1283 made Current and Incoming unambiguous. For a blocked PR, we would first check the latest required pytest result and an eligible reviewer's approval. For merge, test or workflow failures, we would inspect the branch base, conflicting lines, failing assertion or failing job step before changing code.

Team and feature plan

README

Group size: 3. Chosen theme: To-Do List.

Member	GitHub username	Assigned feature
Soulaymane Alahiane	soulaymanealahiane	A: Add tasks with validated titles and unique IDs
Aya Drissi	Aya-Drissi	B: Mark tasks complete and reopen tasks
Rim Zemmouri	Rimzemmouri	C: Filter all, pending, and completed tasks; integrate the command-line menu

Each member uses their own clone, feature branch, at least two meaningful commits, at least two unit tests, and a Pull Request into main.

Review rotation: Aya reviews Soulaymane, Rim reviews Aya, and Soulaymane reviews Rim. Leave a meaningful line comment before approval. At least one PR must complete a Request changes and same-branch correction cycle.

Run

Use Python 3.12 or later. Once the feature PRs are merged:

```
python -m pip install -r requirements.txt
python -m todo
```

Tasks remain in memory during the session.

Public main after PR #3 merged: application modules, tests, workflow, docs, requirements and report directory.

Active main ruleset

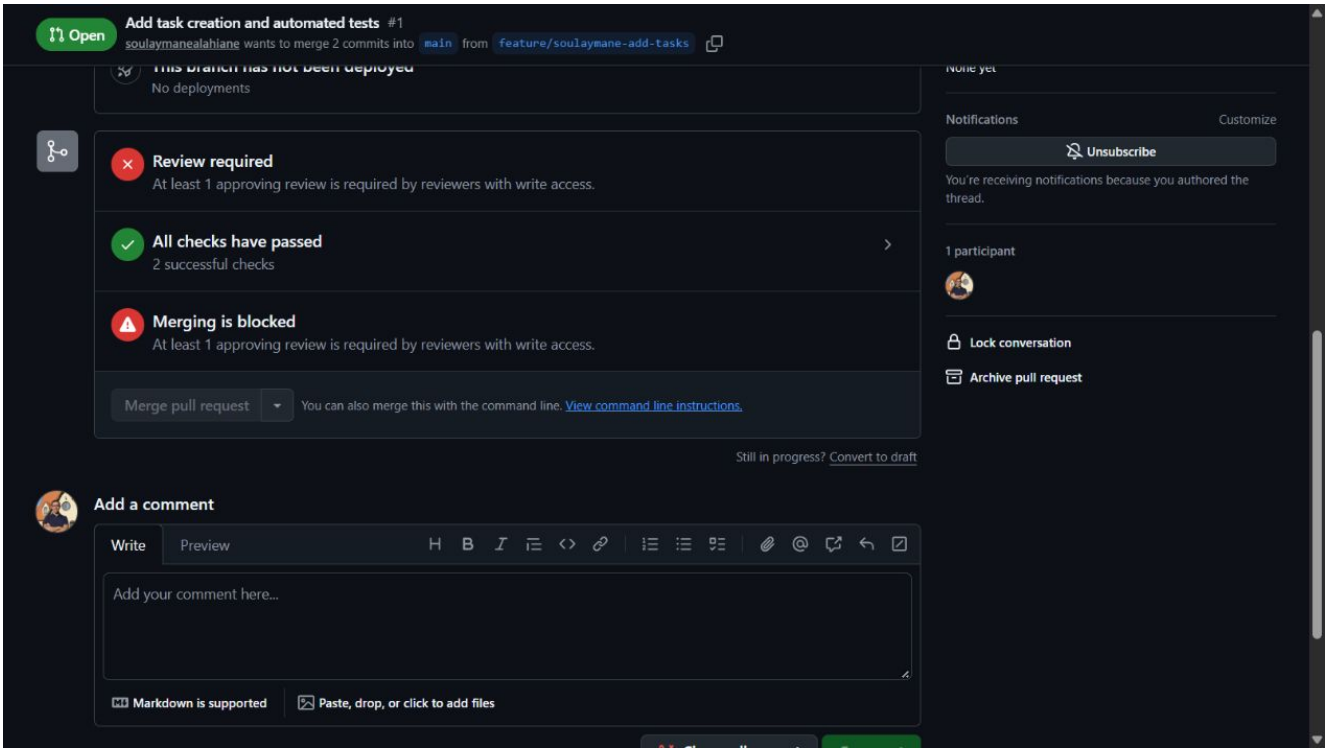

Active main protection with one required approval, pytest, deletion restriction and blocked force pushes. Ruleset

Requested change and later approval

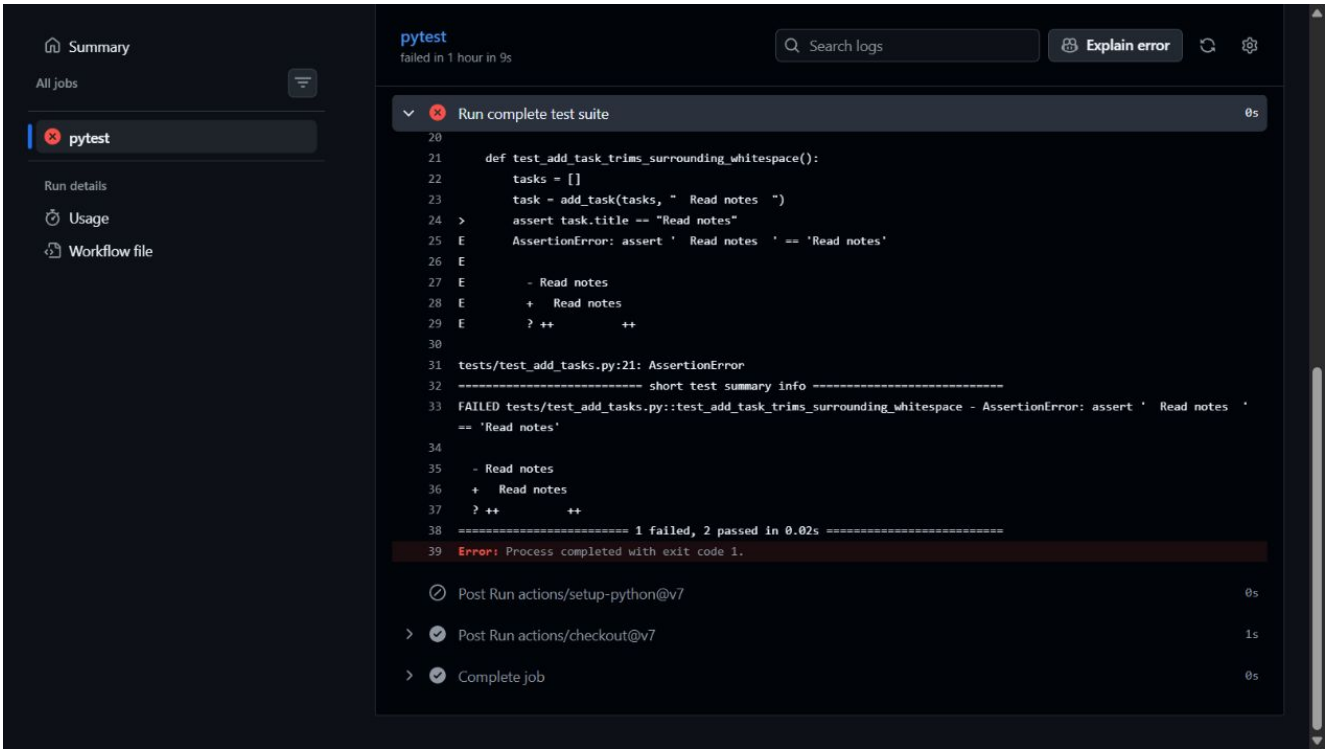

Aya's real inline ID-allocation request and subsequent approval on PR #1. The author's same-branch correction is commit 5dd392b. Review record

Passing checks with merge still blocked

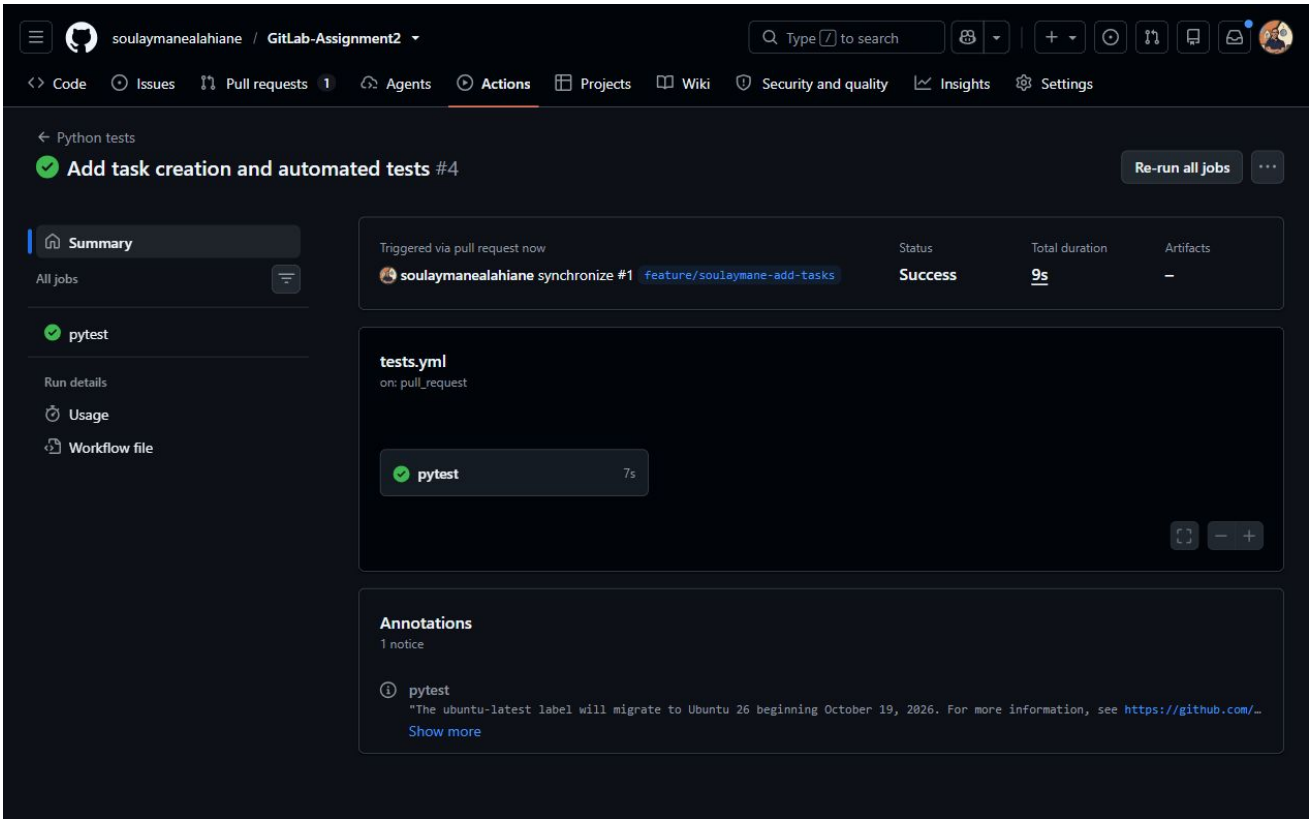

Historical PR #1 state: both checks passed, but one approving review was still required.

Failed CI output

Actual whitespace assertion failure: 1 failed, 2 passed. Failed run

Successful CI after correction

The same branch passed after 662b386 corrected title trimming. Successful run

Local test results and Git conflict history

Assignment 2 recorded Git and local test evidence

Complete local pytest suite

Actual captured output from the integrated application at commit 217f95d. Command: python -m pytest -p no:cacheprovider

 ## Team and feature plan
```

A browser view of the actual captured 15-test local output and git show --remerge-diff 28b1283. The conflict markers are reconstructed by Git from the recorded parents and compared with Rim's committed resolution; this is not an original merge-time screenshot.

Final Pages update prepared in PR 4

To-Do List

Assignment 2 group project. Theme: To-Do List.

Team and assigned features

- Soulaymane Alahiane: add tasks with validated titles and unique IDs.
- Aya Drissi: complete and reopen tasks.
- Rim Zemmouri: filter tasks and integrate the command-line menu.

Implemented features

All three team features are integrated.

- Add tasks with unique IDs and validated, trimmed titles.
- Complete tasks and reopen them as pending.
- List all tasks, pending tasks, or completed tasks.

Running the project

Use Python 3.12 or later:

```
git clone https://github.com/soulaymanealahiane/GitLab-Assignment2.git
cd GitLab-Assignment2
python -m pip install -r requirements.txt
python -m todo
python -m pytest
```

Tasks are stored in memory for the current session.

Choose 1 to add a task, 2 to complete a task, 3 to reopen a task, 4 to list all tasks, 5 to list pending tasks, 6 to list completed tasks, or 0 to exit. Completion and reopening ask for the task ID shown in the lists.
