Assignment 2 Group Report

Draft pending the other members' contributions and required group evidence.

Soulaymane's task creation feature is implemented and tested on PR #1. The remaining features, peer review cycle, controlled conflict, and final Pages update are pending.

Group Size: 3 **Chosen Theme:** To-Do List

Full Names: Soulaymane Alahiane; Aya Drissi; Rim Zemmouri

Student IDs: Soulaymane 158002; Aya 147970; Rim 169600

Course Codes & Sections: Soulaymane CSC 3324 03; Aya CSC 3324 03; Rim CSC 3324 01

GitHub Usernames: soulaymanealahiane; Aya-Drissi; Rimzemmouri

GitHub Repository URL:
https://github.com/soulaymanealahiane/GitLab-Assignment2

GitHub Pages URL:
https://soulaymanealahiane.github.io/GitLab-Assignment2/

Project & Role Distribution

We follow the 3-member path. Soulaymane owns adding validated tasks with unique IDs. Aya owns completion and reopening. Rim owns filtering and the final command-line integration. Tasks are stored in memory.

Branches, Commits & Contributions

Soulaymane cloned the shared repository and uses **feature/soulaymane-add-tasks**. Commit **25b2ef5** added task creation, three tests, and CI; **662b386** corrected title trimming. The initial structure and team plan were published on main in **7ead0e0** before protection. Aya's and Rim's feature branches and commits are pending.

Pull Requests & Code Review

Soulaymane's PR #1 is open and awaits Aya's review. Rotation: Aya reviews Soulaymane, Rim reviews Aya, and Soulaymane reviews Rim. The required meaningful line comments, Request changes, same-branch author correction, re-review, and approval cycle are pending; the CI correction alone is not that review cycle.

Merge Conflict

Pending. Aya and Rim will branch from the same latest main, change the exact shared README status line differently, and merge Aya's change first. On Rim's branch, Current will be her status and Incoming will be Aya's status from origin/main. Rim will resolve and commit the combined line; Soulaymane will review as the third member.

Unit Tests

The current full suite has three tests: normal creation checks unique IDs, preserved tasks, and pending state; the boundary case trims surrounding whitespace; invalid blank input raises ValueError without mutating the list. The local suite passes. Aya and Rim must each add at least two meaningful tests, with at least six tests in the final suite.

```
python -m pytest
platform win32 -- Python 3.12.14, pytest-9.1.1, pluggy-1.6.0
collected 3 items
tests\test_add_tasks.py ...                                              [100%]
============================== 3 passed in 0.01s ==============================
```

Continuous Integration

.github/workflows/tests.yml runs on pushes and Pull Requests. Its **pytest** job uses ubuntu-latest, checks out the code, prepares Python 3.12, installs requirements.txt, and runs python -m pytest. Run 38324302205 failed because a title was checked with strip() but stored with surrounding spaces. Commit 662b386 stores the trimmed title; run 38324521813 passed. The failed output was inspected before the fix.

Ruleset & Protected main

The active **Protect main** ruleset targets main, requires a Pull Request and at least one approval, restricts deletion, and blocks force pushes. Its bypass list is empty. After CI succeeded, **pytest** was added as a required status check. PR #1 shows passing checks while merging remains blocked for a missing approval. The final approved merge is pending.

Continuous Deployment

GitHub Pages publishes **main /docs**. The initial build succeeded and the live page was verified. Its title, theme, team, feature plan, and run instructions are present. The feature update is on PR #1; Rim's final visible page update through a separate branch and PR, and verification of the automatic live update, are pending. The live URL is in README.md and this report.

Contribution Summary

Soulaymane: task creation, feature branch, PR #1, three tests, CI failure/fix, repository setup, ruleset, Pages setup, and this report draft. Review of Rim's PR is pending.
Aya: assigned completion/reopening and review of PR #1; implementation, branch, PR, review, and tests pending.
Rim: assigned filtering/menu, review of Aya, conflict resolution, and final Pages update; implementation, branches, PRs, reviews, and tests pending.

Fair Use of AI

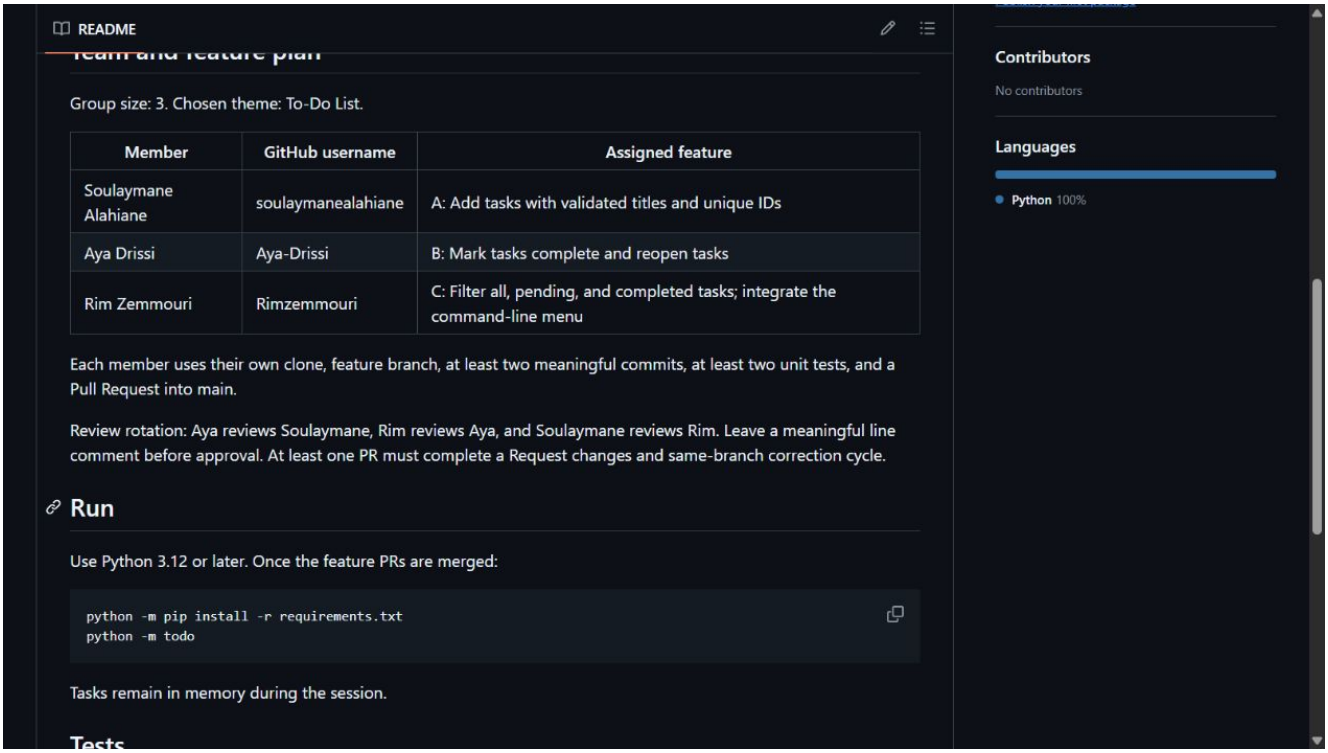

Soulaymane used Codex to plan the feature split, generate his Python feature and tests, configure GitHub Actions, main protection and Pages, inspect test results, and prepare the report draft. The work and verification are attributable to his account. Aya and Rim must supply their actual AI use before the final group report is completed.

Sources & Reflection

Sources used for the current work: the supplied Assignment 2 document; pytest Get Started; actions/checkout; actions/setup-python; GitHub rulesets API; GitHub Pages publishing sources.

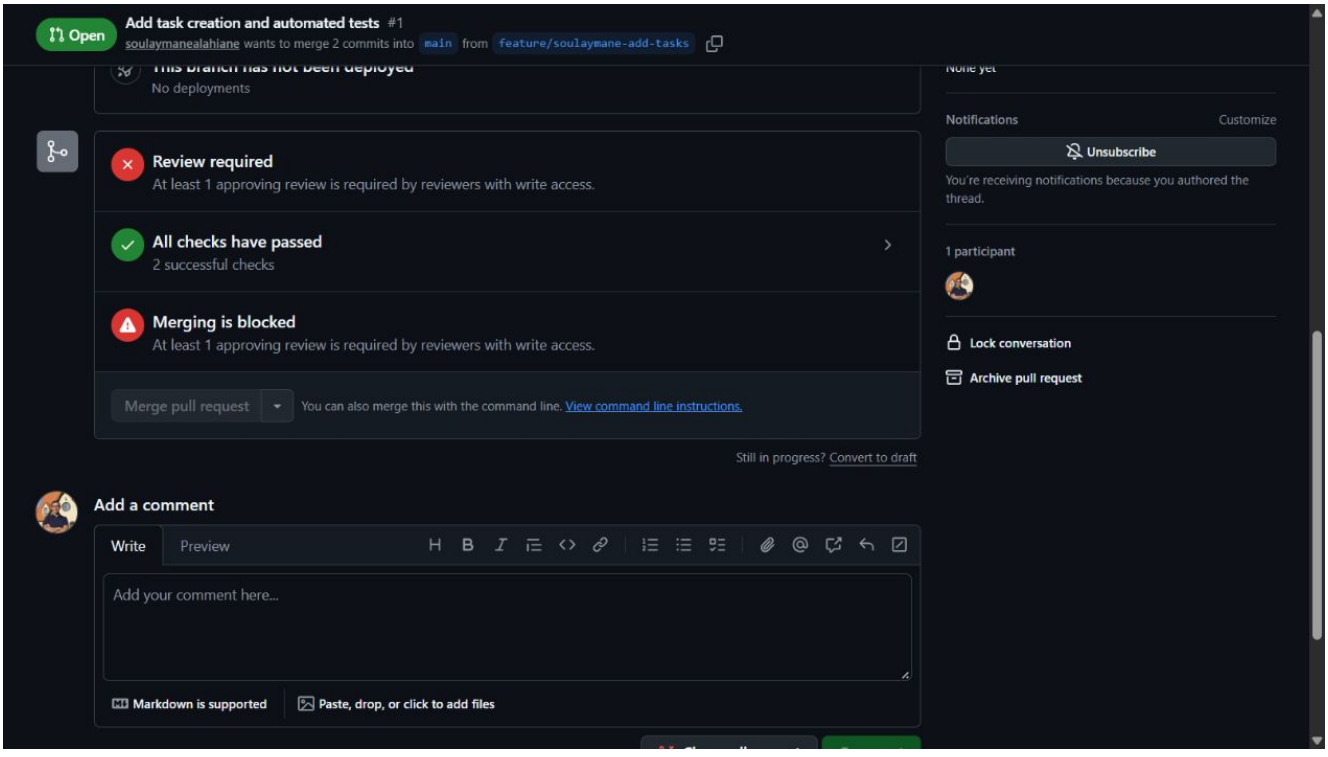

Current reflection: preserving the failed run while correcting the same branch required keeping the two commits distinct. The whitespace test showed that validating a stripped value is insufficient if the original value is stored. If a PR is blocked, we would first inspect its required approval and pytest result for the latest commit. For a merge or test failure, we would inspect the conflicting lines or failing assertion before changing code.

Team and feature plan

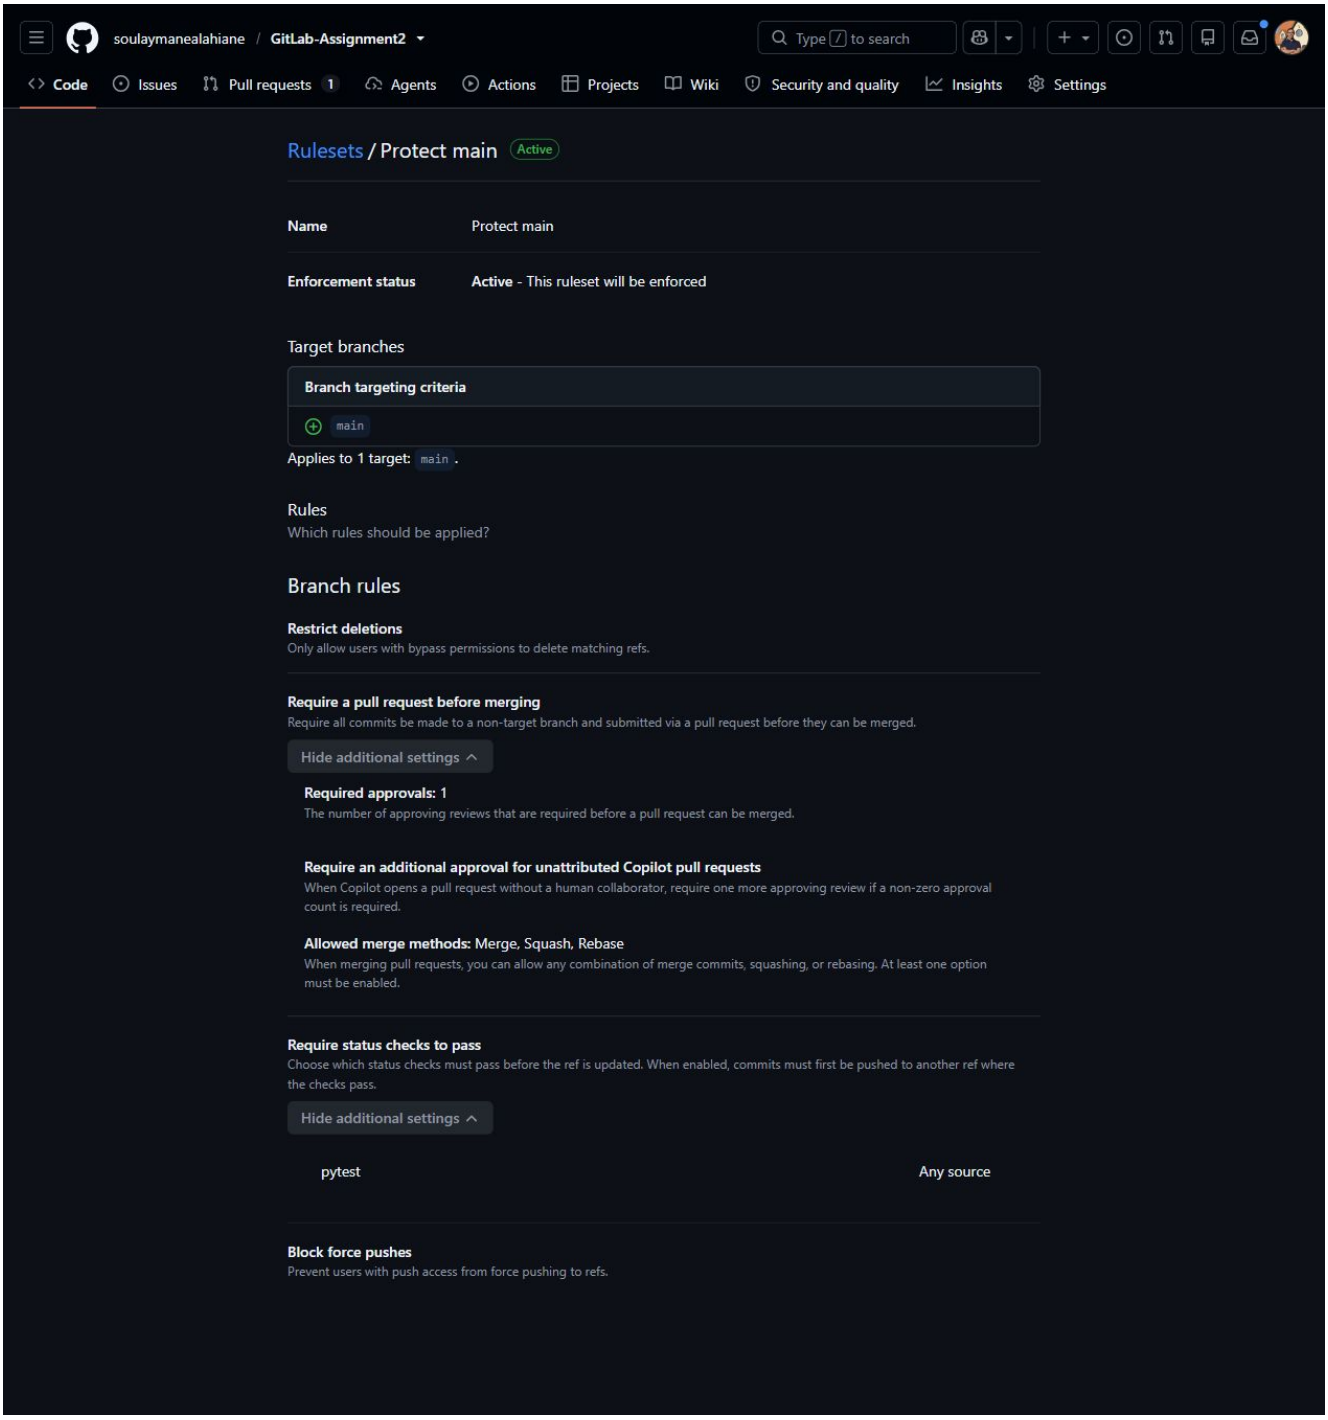

Published README plan for the three members. The final repository structure will be added after all feature PRs merge.

Pull Request blocked until review

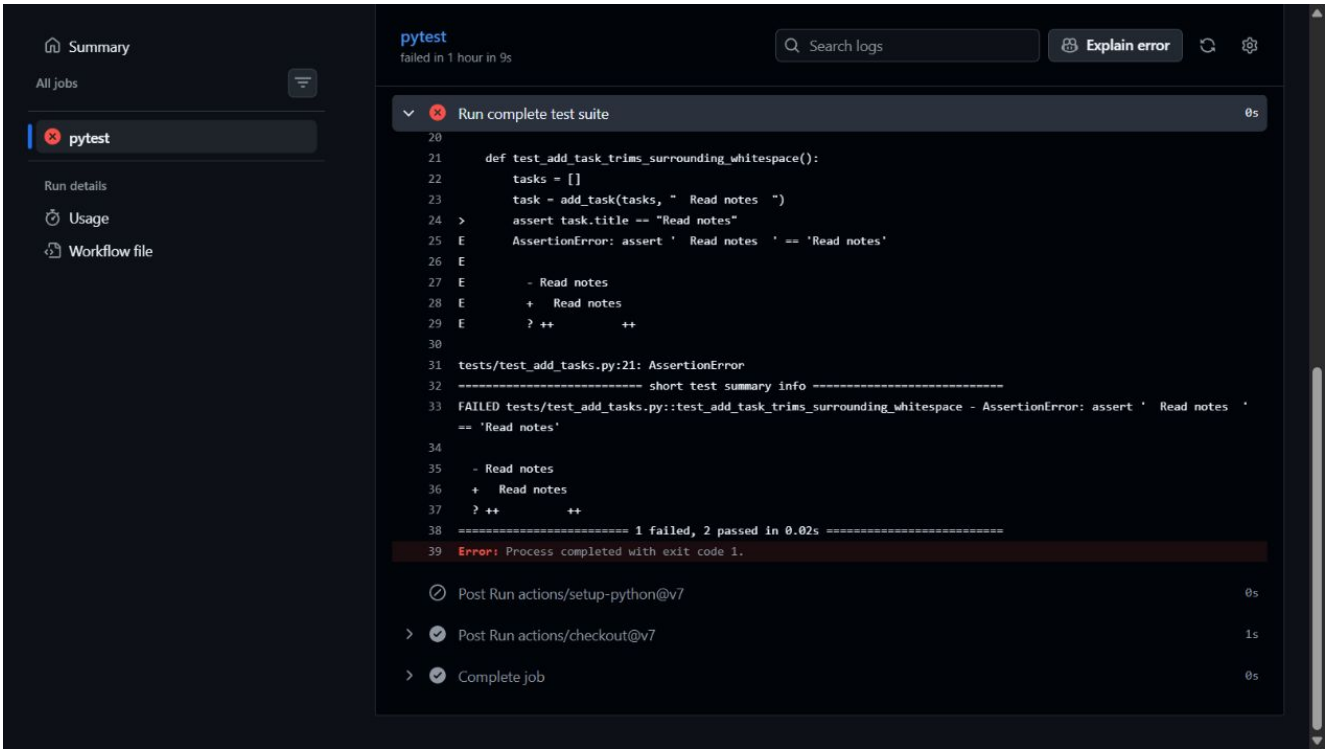

PR #1 has passing checks but still requires one approving review. PR #1

Active main ruleset

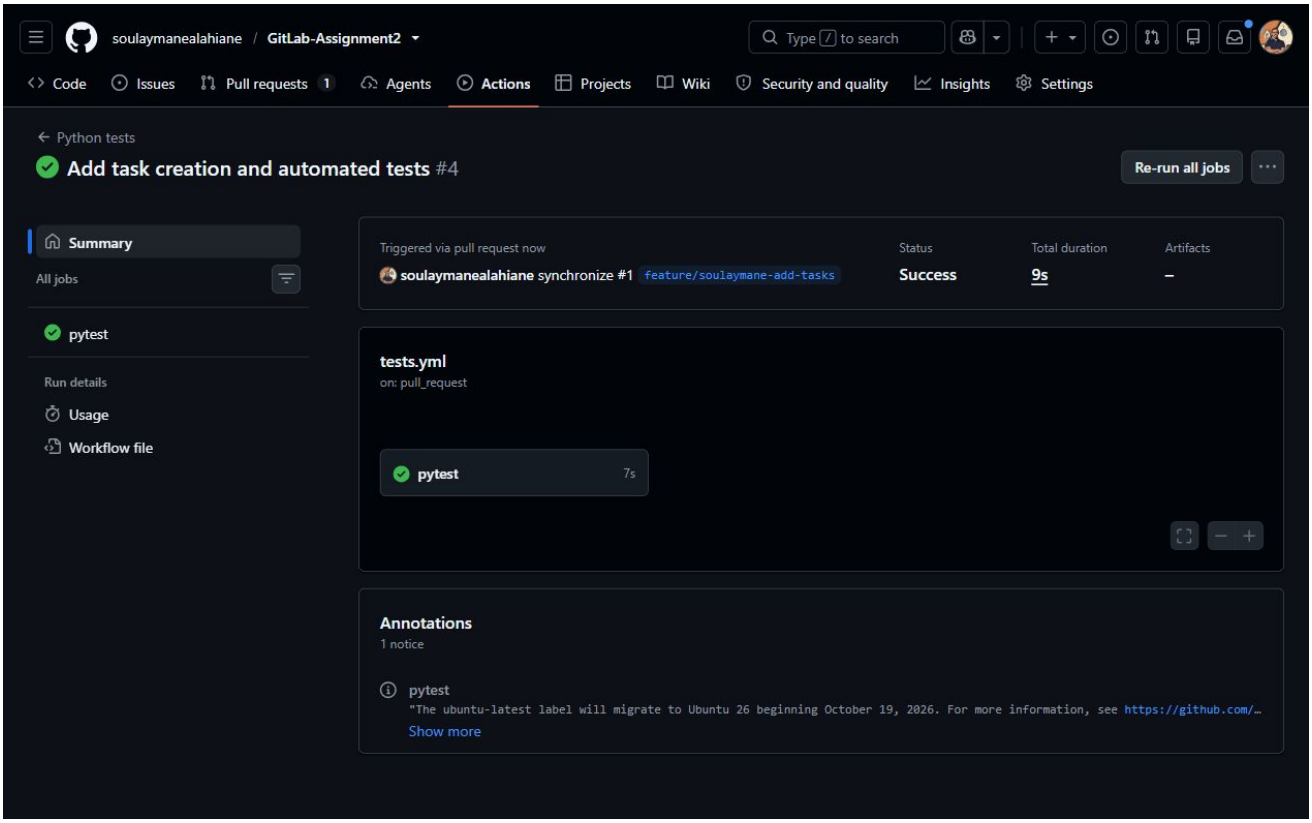

Active protection targets main and includes one approval, required pytest, deletion restriction, and blocked force pushes.
Ruleset

Failed CI output

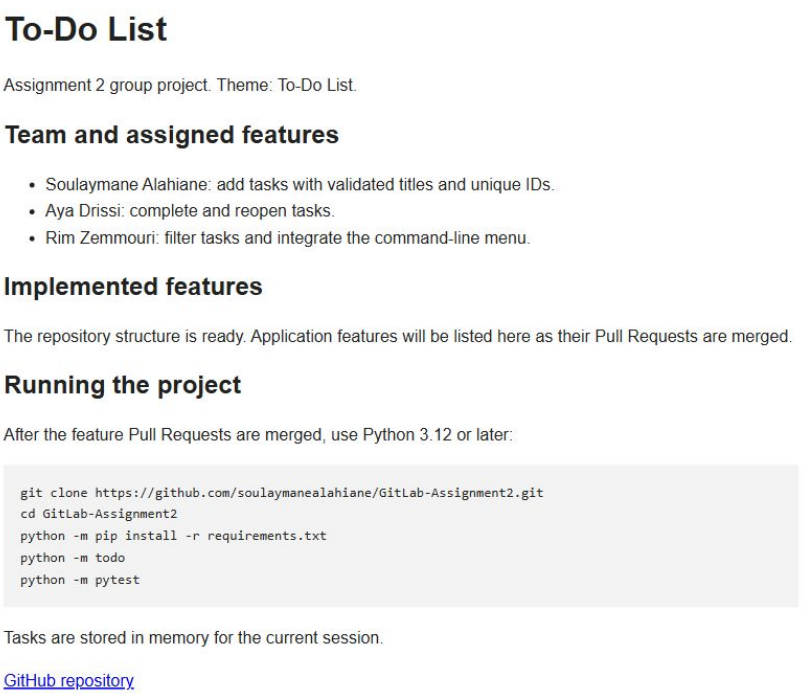

The actual failing assertion shows surrounding spaces in the stored title: 1 failed, 2 passed. Failed run

Successful CI after correction

The same branch passed after title trimming was corrected. Successful run

Live initial GitHub Pages site

To-Do List

Assignment 2 group project. Theme: To-Do List.

Team and assigned features

- Soulaymane Alahiane: add tasks with validated titles and unique IDs.
- Aya Drissi: complete and reopen tasks.
- Rim Zemmouri: filter tasks and integrate the command-line menu.

Implemented features

The repository structure is ready. Application features will be listed here as their Pull Requests are merged.

Running the project

After the feature Pull Requests are merged, use Python 3.12 or later:

```
git clone https://github.com/soulaymanealahiane/GitLab-Assignment2.git
cd GitLab-Assignment2
python -m pip install -r requirements.txt
python -m todo
python -m pytest
```

Tasks are stored in memory for the current session.

GitHub repository

The initial page is live at https://soulaymanealahiane.github.io/GitLab-Assignment2/. This is the initial publication; the final visible update is pending.

The final report will replace this draft after the group completes its work, adding the review cycle, unresolved and resolved conflict, final repository/test results, and updated live page evidence. The final screenshot selection should total approximately 8-10 useful images.
